

Earth's Spheres Collage

Objective:

To identify how a variety of examples can be classified into the four spheres: atmosphere, lithosphere, biosphere, and/or hydrosphere.

Requirements:

- Have the **title**, "Earth's Spheres", neat and prominent.
- Have **four sections** of the collage, one for each of the four spheres.
- Each of the four sections is labelled, neatly and prominently: **atmosphere, lithosphere, biosphere, or hydrosphere**
- **5-10 picture examples** of things from **each sphere**. The pictures could be cut & pasted from magazines, printed from the internet, or hand drawn (no fine lining or colouring required).
- On the **BACK** of your collage, choose **3-5 things whose sphere is UNCLEAR**. Maybe it seems to belong to more than one sphere or maybe you do not think that it belongs to any of the spheres. **Explain why you are not sure what sphere it belongs to**. You might have a table like this on the back of your collage:

ITEM PICTURE	Why you are not sure which sphere it belongs to

Optional:

- Definition of the spheres
- Labeling your example images (be sure to do this if an example is unclear)
