

Scientific Method Lab

Name:

Date:

Block:

Question:

What will happen to the *size of the balloon* when the same amount of _____ but different amounts of _____ are combined?

Hypothesis:

IF the same amount of vinegar is combined with _____ baking soda, **THEN** what will happen is _____

BECAUSE _____

Experimental Design:

1. Materials

- | | |
|---------|---------|
| • _____ | • _____ |
| • _____ | • _____ |
| • _____ | • _____ |
| • _____ | • _____ |
| • _____ | • _____ |

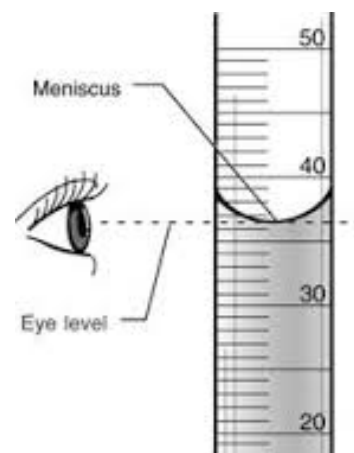

2. Procedure

- a) CLEAN everything you'll be using (it may be contaminated with other chemicals)
- b) Use the graduated cylinder to measure 50.0 mL of vinegar. Carefully pour the 50.0 mL of vinegar into the Erlenmeyer flask.
 - i. Use the eye dropper to be as EXACT as possible!
 - ii. Make sure you are reading the correct number of mL on the graduated cylinder...

How many mL would this be? _____

The CURVED LINE a liquid forms at its top in a graduated cylinder is called a _____.

The correct liquid measurement is the number at the _____ of the meniscus curve!!!!
- c) Use the digital scale to measure 2.0 grams of baking soda
 - i. Turn digital scale ON
 - ii. Make sure it is set to read in GRAMS
 - iii. Put a weigh boat on it, then set it to ZERO (or TARE)
 - iv. Add baking soda, using the scoopula to be as EXACT as possible
- d) Bend the weigh boat and pour the baking soda into the balloon.
- e) Carefully place the balloon on the mouth of the Erlenmeyer flask, then tip the balloon over so that the baking soda falls in to the vinegar
- f) Hold on to the base of the balloon so that the carbon dioxide that is produced is trapped.
- g) Use a ruler to measure out the height of the balloon from the opening of the Erlenmeyer flask to the top of the balloon
- h) Repeat these steps for the baking soda measures of 4.0 g and 6.0 g.

3. Safety Considerations

- What safety hazards are there? What precautions should you take?

- What safety equipment should you use and why?

Experiment:

Now carry it out!

Data & Observations:

Suggestion: Use a RULER to measure the height of each balloon. Use a table to compare the results:

Amount of Vinegar	Amount of Baking Soda	Height of Balloon when Baking Soda and Vinegar were combined (Quantitative Observations)
50.0 mL	2.0 g	
50.0 mL	4.0 g	
50.0 mL	6.0 g	

What are some **qualitative observations** you can make from this experiment? Discuss at least two qualitative observations in your response

Error Analysis:

What is a source of error?

Discuss the changes and suggestions you would make to the procedure in order to improve the experiment to get better results. A source of error is issues with the procedure of a lab that may introduce errors or cannot be controlled for, but perhaps improved upon. These could include:

- Impurities (from previous experiments, or that cannot be completely rid of)
- Human reaction time
- Limitations to measuring techniques (i.e. 1 drop – can you be certain that each drop size is the exact same?)
- Etc...

What is NOT a source of Error?

- Avoid using human errors
- Measuring improperly
- Malfunctioning equipment
- Mistakes or oversights on the part of the scientist
- Not following procedure
- Punching numbers into your calculator incorrectly
- Etc...

What are some sources of error in this experiment? Be specific!

How may these sources of error affect your results? Be specific!

Emerging	Developing	Proficient	Extending
<p>Safety hazards and equipment are not accurately identified</p> <p>Hypothesis does not relate to the question and explanation is not relevant</p> <p>Not all data recorded is relevant; a few key pieces missing. Units of measurement are missing or incorrect.</p>	<p>Safety hazards and equipment are somewhat accurately identified</p> <p>Hypothesis somewhat relates to the question and a brief explanation is provided</p> <p>Most data recorded is relevant, but some is still missing. Some units of measurement are included.</p>	<p>Safety hazards and equipment are accurately identified</p> <p>Hypothesis is relevant to the question, though, explanation needs to be expanded on</p> <p>All data recorded is relevant. Most units of measurement are included.</p>	<p>Safety hazards and equipment are accurately identified and explanations of precautionary measures are accurately identified</p> <p>Hypothesis is relevant to the question and provides a reasonable scientific explanation</p> <p>All data recorded is relevant. All units of measurement are included.</p>

Clean-Up:

Clean up your station and call the teacher over for your lab clean-up check

Emerging	Developing	Proficient	Extending
<p>The lab may be started on time but is not completed before the designated end time. Significant teacher assistance is required.</p> <p>Equipment is rarely handled correctly/safely. Lab is completed with a few safety mistakes. A few reminders are needed to keep safety glasses on. Reminders are needed to return equipment.</p> <p>The lab is conducted by certain individuals, while other members are off task.</p>	<p>The lab is started on time but is not completed before the designated end time. Some teacher assistance is required.</p> <p>Equipment is occasionally handled correctly and safely. A few reminders are needed to keep safety glasses on. Some equipment is properly cleaned/returned. The lab bench is wiped down.</p> <p>The lab is conducted by certain individuals, while the other members of the group observe. Everyone is treated with respect.</p>	<p>The lab is started on time and completed by the designated end time. The lab is completed with minor teacher assistance.</p> <p>Equipment is mostly handled correctly and safely. Safety goggles are almost always worn. Almost all equipment is properly cleaned/returned. The lab bench is wiped down and clean.</p> <p>The lab is conducted between group members, but someone is taking the lead. Everyone is treated equally and with respect.</p>	<p>The lab is started on time and completed efficiently. The lab is completed independently, without teacher assistance.</p> <p>All equipment is handled correctly/safely. Safety goggles are worn at all times. All equipment is cleaned and returned. The lab bench is wiped down and clean.</p> <p>The lab is conducted collaboratively between your group members. Everyone is treated equally and with respect.</p>

Variables:

What was the **independent variable** in this experiment?

What was the **dependent variable** in this experiment?

What was the **controlled variable** in this experiment?

Conclusion

Write a **short paragraph conclusion** about this lab. Be sure to answer these questions in your paragraph:

- a. What did you discover?
- b. Was your hypothesis supported or not supported?
- c. What factors may have affected your results?
- d. If you were to redo the experiment, what changes would you make?
- e. What can you conclude in this experiment?

Emerging	Developing	Proficient	Extending
<p>The student cannot connect their observations and data to their hypothesis. The students lack understanding of the connection between variables.</p> <p>Suggested procedural adjustments lack concrete detail and/or are unrelated to the errors identified.</p> <p>Many grammatical errors; ideas are presented in a jumbled manner. Little scientific vocabulary is used correctly.</p>	<p>The student makes some connections between their observations, data, and hypothesis. The student has some understanding of the connection between variables.</p> <p>Procedures are described to improve the accuracy and precision of the lab, but lack detail or aren't entirely related to the errors identified.</p> <p>Some grammatical errors; ideas presented somewhat logically. Some scientific vocabulary is used correctly.</p>	<p>The student correctly connects their observations and data to their hypothesis. The student can accurately identify the relationship between variables.</p> <p>Procedures to improve the accuracy and precision of the lab are described in some detail. The recommendations mostly correspond to the errors identified.</p> <p>Few grammatical errors; ideas presented logically. Scientific vocabulary is used correctly.</p>	<p>The student correctly connects their observations and data to their hypothesis. The student can clearly articulate the relationship between variables.</p> <p>Very specific procedures are described to improve the accuracy and precision of the lab. The recommendations correspond to the errors identified.</p> <p>No grammatical errors; logical flow of ideas. Scientific vocabulary is used correctly.</p>
